Pune, India

Professional Summary

Software Engineer with 2+ years of experience building scalable backend systems, real-time data pipelines, and AI-powered industrial platforms. Proficient in Python, Node.js, Django, and distributed systems (Apache Kafka, PySpark, Cassandra). Proven expertise in machine learning integration (Detectron2, Mask R-CNN), REST API development, and end-to-end deployment across cloud and on-premise environments. Strong foundation in system design, data structures, and agile software development.

Work Experience

Insightzz

Python Developer (Full Stack)

Pune, India

May 2025 – Present

- Contributed to the development and deployment of an AI-powered industrial inspection platform for automated vehicle validation and compliance monitoring.
- Engineered backend services for orchestrating inspection workflows, processing inspection results, and managing operator feedback across 13+ deployment sites.
- Designed and executed data integration services to synchronize operational data between on-premise systems and enterprise applications through secure REST APIs, reducing sync latency by 35%.
- Built result-processing pipelines enabling real-time status updates, centralized reporting, and seamless integration with client systems, cutting manual reporting time by 70%.
- Architected cloud-connected synchronization services to consolidate inspection data, operational metrics, and user feedback from 10+ locations into a centralized monitoring platform.
- Applied system health monitoring and alerting mechanisms across infrastructure components, achieving 99.5% uptime and improving incident response time by 40%.
- Systematized generation and distribution of inspection reports, dashboards, and email notifications for operational stakeholders, eliminating manual overhead for 3+ daily report cycles.
- Maintained deployment, upkeep, and troubleshooting of production systems across geographically dispersed industrial sites, supporting 12+ active client installations.

L&Q Technology Private Limited

Software Engineer

Bengaluru, India

June 2024 – May 2025

- Developed scalable backend for a Car Service Management System using Node.js and MySQL with layered architecture (DAO, services, controllers), supporting 500+ concurrent users.
- Enforced secure authentication workflows including JWT-based sessions and password reset functionality with email verification.
- Built a comprehensive manager dashboard with real-time employee tracking, service analytics, and inventory management using ReactJS.
- Architected a real-time data processing platform using Apache Kafka, PySpark, and Node.js handling 10,000+ messages/second with sub-second latency.
- Integrated Cassandra, MongoDB, and Apache Ignite for scalable data storage and high-performance rule evaluation at scale.
- Deployed and monitored production systems on Linux servers with fault-tolerant configurations, ensuring zero downtime during peak loads.
- Designed PySpark streaming pipelines processing structured data between Kafka topics with data validation and transformation logic.

Education

Maulana Azad National Institute of Technology (MANIT)

Master of Computer Applications (MCA) – CGPA: 7.86/10

Bhopal, India

2021 – 2024

Govt. P.G. College, Khargone

Bachelor of Science in Computer Science – Grade: A

Khargone, India

2016 – 2019

Technical Skills

Languages: Python, JavaScript, Java, C++, SQL
Backend & Frameworks: Django, Node.js, Express.js, REST APIs, PySpark, Apache Kafka
Frontend: ReactJS, Ionic, PyQt5
Databases: MySQL, MongoDB, Cassandra, Apache Ignite
Machine Learning & AI: Detectron2, Mask R-CNN, Computer Vision, Model Deployment, PyTorch
DevOps & Cloud: Git, Linux, Docker, AWS (EC2), Postman
Core Concepts: Distributed Systems, Real-Time Data Processing, System Design, SDLC, OOP, Data Structures & Algorithms

Projects

- KartNow – E-Commerce Android Application** | *Java, MySQL, AWS EC2, Android Studio* 2023
- Built a full-stack Android e-commerce platform with user authentication, shopping cart, and product catalog features.
 - Deployed MySQL database on AWS EC2 with optimized queries, reducing average response time to under 200ms.
 - Established a secure login system with encrypted password storage and session management for 100+ test users.

Certifications & Leadership

Certifications: TCS iON Career Edge – Young Professional | Google Data Analyst Professional Certificate (Google)
Leadership: Executive Member – MCA Department (2022–23) | Class Representative (2022–2024)
